

SupportOS – Help Center & Knowledge Base

What is SupportOS?

SupportOS is an AI-powered customer support platform for SaaS companies and online businesses. It provides a chat widget you embed on your website that instantly answers customer questions using your company's documentation. When the AI can't handle a question, it automatically escalates to your human support team with full context.

Getting Started

How do I sign up?

Visit our website and click "Start for free." You'll get a free trial with your first 500 tickets included – no credit card required.

How do I set up my account?

1. Sign up and log into the dashboard
2. Go to **Chatbot** → Upload your company documents (FAQs, product guides, PDFs)
3. Go to **Settings** → Copy the embed code
4. Paste the embed code into your website's HTML
5. That's it! Your AI support agent is live

What file formats can I upload?

You can upload PDF files, text documents, and other common document formats. The AI will learn from whatever you upload and use that knowledge to answer customer questions.

Dashboard & Features

Overview Page

The Overview page shows your key performance indicators at a glance:

- **Total Tickets** – Number of support tickets in the last 7 days
- **Bot Resolved** – Tickets the AI handled without human help
- **Avg Response Time** – How quickly customers get answers
- **Customer Satisfaction** – Based on interaction quality

Inbox

The Inbox is where you manage all customer conversations:

- **All Open** – View all unresolved tickets
- **Assigned to me** – Tickets assigned to you specifically
- **Resolved** – Previously closed tickets
- Click any ticket to see the full conversation thread
- Type a reply and click **Send** or use **Resolve & Send** to close the ticket

Analytics

Deep analytics to understand your support operations:

- **Customer Satisfaction Trend** – Track happiness over time
- **Top Customer Questions** – AI-clustered by topic to see what customers ask most
- **Resolution Breakdown** – Bot vs human resolution rates
- **Peak Support Hours** – When customers need help most
- **Escalation Rate** – Percentage of tickets needing human intervention
- **Response Time Comparison** – Bot vs human speed
- You can export analytics as a PDF report

Chatbot Configuration

Train your AI assistant:

- Upload documents to your **Knowledge Base**
- The AI learns from your documents and answers questions based on them
- Test the chatbot directly from the dashboard before going live
- Documents can be added or removed at any time

Settings

- **Profile** – Update your name
 - **Embed Code** – Copy the JavaScript snippet to add the chat widget to your website
 - Simply paste the code before the closing `</body>` tag on your site
-

Chat Widget

How do I install the widget on my website?

1. Go to **Settings** in your dashboard
2. Copy the embed code snippet
3. Paste it into your website's HTML, just before the closing `</body>` tag
4. The chat bubble will appear on your site automatically

What does the widget look like?

A small chat bubble appears in the bottom-right corner of your website. When customers click it, a chat window opens where they can type their questions and get instant AI-powered responses.

Can I customize the widget?

The widget automatically uses your organization name and provides a clean, professional chat interface that works on both desktop and mobile devices.

Billing & Subscription

What plans are available?

We offer two plans:

- **Monthly Plan** — Flexible month-to-month billing
- **Yearly Plan** — Save with annual billing

Do I get a free trial?

Yes! Every new account gets a free trial period. No credit card is required to start.

How do I upgrade or change my plan?

When your trial ends or you want to upgrade, the billing screen will appear with plan options. Select your preferred plan and complete the checkout process.

What happens when my subscription expires?

You'll see a billing overlay prompting you to renew. Your data and settings are preserved — just renew to regain access.

How do I cancel?

Contact us through the support chat or email us at jashkevdiya@gmail.com.

Troubleshooting

The widget isn't showing on my website

- Make sure the embed code is placed before the closing `</body>` tag
- Check that your website doesn't have a Content Security Policy blocking external scripts
- Try clearing your browser cache and refreshing the page

The AI isn't answering questions correctly

- Make sure you've uploaded relevant documents to the Knowledge Base
- The AI answers based on your uploaded docs — the more comprehensive they are, the better the answers
- Try uploading additional FAQs or product documentation

I'm not receiving ticket notifications

- Check your Inbox in the dashboard — all tickets appear there in real time
- Make sure you're checking the correct filter (All Open vs Assigned to me)

Customers say the chat isn't working

- Verify the embed code is correctly installed on your website
 - Check that the widget script URL is accessible
 - Try testing from an incognito/private browser window
-

Contact & Support

How can I get help?

- **In-app chat** – Use the support chat widget in your dashboard (we use SupportOS ourselves!)
- **Email** – jashkevdiya@gmail.com
- **Contact form** – Visit our website and scroll to the contact section

Response time

We typically respond within 24 hours.

Tips & Best Practices

1. **Upload comprehensive docs** – The more context your AI has, the better it performs
2. **Check your Inbox regularly** – Escalated tickets need human attention
3. **Review Analytics weekly** – Spot trends and improve your knowledge base based on top questions
4. **Keep documents updated** – When your product changes, update your uploaded docs so the AI stays accurate
5. **Test before going live** – Use the chatbot tester in the dashboard to verify answers before embedding on your site
